

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

TKM COLLEGE OF ENGINEERING

ESTD. 1958 Govt. Aided and Autonomous Institution

Affiliated to APJ Abdul Kalam Technological University, Kerala

Guidelines for conducting the S7 seminar

(Course Code: CSQ413)

Prof. Dr Dimple A Shajahan

Betch. in Computer Science & Engineering

2022-2026

1. Know Your Objective

- Choose **one focused, research-worthy topic**
(e.g., *AI in Cybersecurity, Blockchain for Finance, Quantum Machine Learning*)
- Define a **central problem or innovation** your seminar addresses
- Tailor content for **peers, faculty, and researchers**
- Be clear on **why it matters now** (timeliness, industry relevance, research interest)

2. Use of Base Paper & Proper Citation

- Select **one core base paper** (*Preferably select base papers published in reputed journals (from IEEE, Science Direct, Elsevier, ACM, Springer) or top-tier A*/A-ranked conferences such as CVPR, ICCV, NeurIPS, ECCV, AAAI, ICML, ICLR etc.*)
 - Should provide the **foundation** for your seminar
 - Include: Title, Authors, Year, Conference/Journal name
- **Highlight:**
 - Problem addressed by the paper
 - Key contributions
 - Methodology and findings
 - How your seminar builds upon it (e.g., improvements, applications, new challenges)
- Cite it properly:
 - Use **IEEE referencing style**
 - In-text citation: [1], [2], etc.
 - Reference slide: Full formatted citation
- If relevant, include 1–2 **supporting papers** for broader context

3. Time Management: 20-Minute Plan

Sl No	Segment	Time
1	Title & Introduction	2 min

2	Problem Statement / Motivation	2 min
3	Background / Related Work	2 min
4	Core Technical Content	9 min
5	Applications / Case Studies	2 min
6	Challenges / Limitations	1 min
7	Future Work	1 min
8	Conclusion	1 min
Total		20 min

(Note: The Q&A session is a **compulsory component** of the seminar. Each student must engage in a **5-minute interaction** with the panel and/or audience, failing which the seminar will be considered **incomplete**.)

4. Slide Design Guidelines

Use a **clean, consistent, and professional design**

- Use **Times New Roman** font (or a similar standard font)
- **Font size:**
 - Minimum size: **18–24 pt** for body text
 - Headings can go up to **34 pt**
- Max **6 bullet points per slide, 6–8 words per line**
- Max **10–12 lines per slide** (*including title and spacing*)
- Avoid overcrowding with **too many sentences or formulas**

Prefer visuals over text:

- Diagrams
- Architecture
- Flowcharts
- Charts / Graphs
- Code snippets (*if short and readable*)

Avoid clutter:

- Use **white space** effectively
- Focus on **one core idea per slide**

Maintain consistency:

- Use the **same font, color scheme, layout, and alignment**

5. Slide-by-Slide Content Structure

Slide 1: Title Slide

- Seminar Title
- Your Name, Roll Number
- Department, Institution
- Date
- College Logo

Slides 2–3: Introduction & Problem Statement

- Hook: statistic, quote, real-world event
- Define the **problem** and **scope**
- Connect to the **base paper**

Slides 4–6: Background / Literature Review

- Introduce core concepts and historical development
- Review 1–2 **related works** briefly
- **Reference base paper** (e.g., “As proposed in [1]...”)

Slides 7–12: Technical Core

- Explain key methods, system architecture, or algorithms
- Include:

- Diagrams
- Code snippets (only if relevant and readable)
- **Base paper's contributions**
- Use citations: e.g., “*Adapted from [1]*”

Slides 13–14: Applications / Case Studies

- Real-world implementations
- Industry use, startups, open-source tools
- Possibly include application used in the base paper

Slide 15: Challenges / Limitations

- Gaps in current methods
- Real-world deployment issues or dataset limitations

Slide 16: Future Scope

- Emerging trends
- Potential improvements to the base method
- Ongoing research in top conferences (CVPR, NeurIPS, etc.)

Slide 17: Conclusion

- Key takeaways in 3–4 bullet points
- Emphasize your learnings and insights

Slide 18: References

- Use **IEEE Style**
- Example:
[1] A. Author, B. Coauthor, “Title of the Paper,” *IEEE Transactions on X*, vol. xx, no. yy, pp. xx–yy, Year.

- Add all sources used: base paper, support papers, datasets, tools

Slide 19: Thank You + Q&A

- Thank the audience
- Invite questions
- Optionally add a “Let’s Discuss” quote or image

Abstract Preparation

- A one page abstract of the seminar topic (preferably a single paragraph with 200 words) is to be prepared and distributed in the classroom, during presentation.
- Abstract should be approved and signed by the guide.
- Abstract gives a **snapshot** of your seminar topic and highlights the **problem**, **methodology**, **key content**, and **importance**
- It helps evaluators and the audience to understand **what to expect**.

Handout Preparation (for Presenter)

- A **presenter handout** (also called a presenter script, cue sheet, or speaker notes) is a **personal guide** containing:
 - **Key points per slide**
 - Supporting facts or examples
 - Reminders (like transitions or demonstrations)
 - Approximate **timing**
 - Use **A4 paper**, font size **12–14 pt**
 - 2–3 pages max
 - Handwritten, Print or keep as a **hardcopy** (don’t rely only on a device)
 - Consider **highlighting key lines** for quick reference
 - Make sure that the handout note and the PPT slides have the same subject flow.

It is **not given to the audience**, but helps you deliver a smooth and structured presentation.

Instructions and Tips for a Good Seminar Presentation

Before the Presentation:

1. **Know Your Topic:**
 - Understand all key concepts and terms thoroughly.
 - Be prepared to explain complex ideas in simple terms.
 2. **Structure Your Slides:**
 - Begin with a title slide, followed by introduction, problem definition, solution or core content, applications, and conclusion.
 - Use bullet points instead of paragraphs.
 - Include clear diagrams and flowcharts wherever applicable.
 - Ensure font size is readable.
 3. **Prepare Notes:**
 - Write slide-wise speaking points or summaries.
 - Include transition cues for moving smoothly between topics.
 4. **Practice:**
 - Rehearse your talk multiple times.
 - Time your presentation to stay within the allotted duration (usually 18–20 minutes for a 20-minute slot).
 - If possible, rehearse in front of a peer or record yourself.
-

During the Presentation:

1. Start Confidently:
 - Greet the audience.
 - Introduce yourself and your topic clearly.
 - Explain the importance or relevance of your topic in current technology or research.
2. Speak Clearly:
 - Use a moderate pace.
 - Avoid fillers like “um,” “you know,” and “like.”
 - Pause briefly after key points for emphasis.
3. Engage the Audience:
 - Maintain eye contact.
 - Vary your voice tone to maintain interest.
 - Point to visuals or slides when explaining important aspects.
4. Avoid Reading Slides:
 - Talk naturally based on your understanding.
 - Use the slides as support, not a script.
5. Use Slides Effectively:

- Keep them visually simple.
 - Highlight key data, terms, and visual aids.
-

Handling Questions:

- Listen carefully to each question.
 - Answer clearly and concisely.
 - If you don't know the answer, politely acknowledge it and say you will follow up later.
-

Ending the Presentation:

- Summarize your key points.
 - Conclude with a short statement about the significance of your work.
 - Thank the audience and invite questions.
-

Common Mistakes to Avoid:

- Reading directly from slides.
 - Using text-heavy slides.
 - Speaking too quickly or too slowly.
 - Not practicing before the presentation.
 - Ignoring time limits.
-

Additional Tips:

- Bring a backup of your slides on a pen drive or cloud.
 - Stay calm and composed throughout.
 - Keep a bottle of water nearby.
 - **Dress professionally and speak confidently.**
-

Bonus Tips

- Have a backup of your presentation (pen drive, email, cloud)
- Keep a bottle of water with you
- Use pointer or laser (if available) for highlighting
- Stay confident — you are the expert on your topic during the talk
